

ST. MICHAEL'S

Another Schwank Success Story

Installation details: A 100 year old church in elevated position overlooking a beach at Aberystwyth. Centralised boiler plant created high energy bills, escalating maintenance costs and a permanently cold environment. Problems resolved by the installation of 14 gas-fired plaque heaters which cut running costs to £1,500 p.a. The church restoration fund has benefited from the 60% energy savings. The neighbouring church of St. Mary's has also upgraded to a Schwank plaque heating system.
