

WHITACRE GARDEN CENTRE

Another Schwank Success Story

Installation details: A large converted glasshouse originally heated by very expensive and inefficient oil-fired warm air unit heaters has been replaced by ten 22-30 Kw individually flued gas-fired radiant tube heaters. Design allowed for four bays, each measuring 6.8 metres wide, 4.5 metres to ridge and 3.5 metres to eaves. Each bay is controlled via black bulb thermostat to maximise energy efficiency. 50% energy savings achieved in the first year.
