

BLACK & DECKER

Another Schwank Success Story

Installation details: A £250,000 investment in 300 Schwank SU80 gas-fired radiant tube heaters achieved energy savings of 30%. The project involved the decentralisation of four 1 million Btu boilers and 150 warm air unit heaters which were responsible for escalating energy bills to £131,000 p.a. and creating maintenance bills of £20,000 p.a. The low bay building occupies an area of 550,000 sq.ft. and each tube heater is flued to atmosphere to ensure a dust-free working environment.
