

LUCY & CO

Another Schwank Success Story

Installation details: 19th Century foundry warmed by 100 gas-fired radiant linear tube heaters. This decentralised project replaced a 30 million Btu centralised gas/oil boiler system and several hundred steam coil warm air unit heaters. An annual energy/maintenance bill of £68,500 has been cut to £24,500 p.a. with greatly improved control and comfort conditions. Savings represent a 2 year payback on a capital investment of £125,500.
